I'm a Software Engineer passionate about learning and creating solutions that help digital content creators realize their dreams. Currently at Hotmart, developing critical and high availability systems with cutting-edge technologies.

EXPERIENCE

Jusbrasil - Software Engineer

10/2025 - Present

- Working as a Full Stack Software Engineer at Jusbrasil. I am part of the JusIA Activation Team.
- Main stack includes NextJS, Node, PostgreSQL, GraphQL, GCP.

Hotmart - Software Engineer

05/2022 - 10/2025

- Contribute to development of critical and highly available systems handling millions of users.
- Apply advanced monitoring techniques (Kibana, New Relic) to ensure optimal performance and reliability.
- Collaborate closely with DevOps and QA teams for efficient and secure solution delivery.
- Lead evolution of frontend testing structures and implement industry best practices.
- Mentor junior developers and contribute to technical architecture decisions.

Cia. Hering - Software Engineer

03/2021 - 05/2022

- Developed innovative features for the brand's e-commerce platform using React and GraphQL.
- Worked closely with cross-functional product teams to translate user needs into scalable technical solutions.
- Improved site performance and user experience through code optimization and modern web practices.

Codeby - Software Engineer

10/2020 - 05/2022

- Working in the development and maintenance of e-commerces. Guiding the team on technical issues and project planning.
- Working mainly with technologies such as React, Koa.js, GraphQL, Vtex IO, Typescript, Sass. Application of performance and performance improvements.
